

client.py

- The client creates a TCP/IP Socket and sends a message to the waiting server.

```
○ (base) noah-gallego@noahgallegenerator:~/Desktop/Lab7$ python server.py
Server Bound to 127.0.0.1 on port 6789
Waiting for a connection...
Connection From ('127.0.0.1', 34716)
Received b'This is the mess'
Received b'age! It will be '
Received b'repeated.'
No more data from ('127.0.0.1', 34716)
█
```

server.py

- The server listens on the same port the client is connected to and uses multithreading to handle multiple clients concurrently for efficiency. However, we only have one client so multithreading is not being utilized here. The server can now scale however.

```
○ (base) noah-gallego@noahgallegenerator:~/Desktop/Lab7$ python server.py
Server Bound to 127.0.0.1 on port 6789
Waiting for a connection...
Connection From ('127.0.0.1', 34716)
Received b'This is the mess'
Received b'age! It will be '
Received b'repeated.'
No more data from ('127.0.0.1', 34716)
█
